

The Rhythmic Power of Water

A weekend journey into the profound capacities of water
with Paul van Dijk

9-11 November 2012 or 15-17 March 2013

Renew your relationship to water, the most fundamental element in nature, through fascinating discoveries and experiments. Through water and its rhythms all living forms are not only created but also their lives are maintained - for without water nothing can live.

How does water move? What is its essential nature? How does life come into being through water?

In this weekend we will do a number of experiments, to observe different qualities of water. The emphasis is given to two clay modelling projects, on Saturday and Sunday, to challenge you to really understand the rhythmic flow of water.

Our world famous Flowform® technology enhances the rhythmic nature of water and helps water support life. In this weekend we will introduce you practically to this extraordinary invention so you can experience your own moment of Flowform® discovery.

There will also be an opportunity given to purchase a Flowform® ceramic work at a discounted price, only for course members.

Practical information

- Venue: School of Water at the Healing Water Institute, Hartfield Road, Forest Row, East Sussex, England
- Time schedule: Friday registration 5-6pm, supper 6.15pm (if taking accommodation at Emerson College), start 8pm ~ Saturday 10.00-6.00pm ~ Sunday 10.00-4.00pm
- Friday evening there will be a public lecture on the weekend's theme and the work of the Healing Water Institute.
- Cost £165, £150 for students, 10% Early Bird Discount when booking 3 months ahead.
- Contact and application: admin@healing-water.org ph +44 1342 827965
- Accommodation and meals for the weekend are in addition to course costs and are available through Emerson College by contacting them directly at bookings@Emerson.org.uk.

The work of the **Healing Water Institute** is built on Goethean scientific research. John Wilkes, the founder of the institute, was an inspiring teacher in this realm. The Healing Water Institute wants to pass on his inspiring understanding of nature.

Paul van Dijk is well known in Holland as a sculptor and performance artist as well as for his Flowform® designs in water treatment and artistic projects. He was one of John Wilkes' first students to learn Flowform® design. As a teacher his favourite subjects are morphology and metamorphosis.
