

Think like Nature

with Paul van Dijk

A weekend course to get an intimate understanding
of life forces in Spring

Two opportunities for you to take the course:
April 19-21 and June 7-9, 2013

In Spring we can observe an overwhelming revolution in plant life: out of Winter's apparent death, there develop living, complex compositions of form and colour, with apparent purpose.

How does that manifest? Which forces are working? And what "organizes" these changes? To discover some answers to these questions, we need to enter into Nature's open secrets.

In this weekend course we will make observations on plants, work on our power of observation and learn to activate our wonder.

In a variety of artistic exercises (including dynamic drawing and movement) we will clarify and intensify our feelings about these impressions.

Together with a careful way of reflecting on them, these exercises will help to develop a living thinking. Attention will be paid to the understanding of the methodical path we follow.

At the end, you will have a more intimate understanding of life forces in plant development, as a sound basis for further discoveries.

Practical information

- Venue: Healing Water Institute, Emerson College, Forest Row, East Sussex, England
- Time schedule: Friday 8pm ~ Saturday 10.00-6.00pm ~ Sunday 10.00-4.00pm
- Friday evening there will be a public lecture on the weekend's theme and the work of the Healing Water Institute.
- Cost £165. Students £150.
- Contact and application: admin@healing-water.org ph +44 1342 827965
- Accommodation and meals for the weekend are in addition to course costs and are available through Emerson College by contacting them directly at bookings@Emerson.org.uk.

The work of the Healing Water Institute is built on Goethean scientific research. John Wilkes, the founder of the institute, was an inspiring teacher in this realm. The Healing Water Institute wants to pass on his inspiring understanding of nature.

Paul van Dijk, a student of John Wilkes, is a sculptor and performance artist and designs Flowform® technology for projects in Holland. As a teacher in Goethean Science his favourite subjects are study of form and movement, plant development and metamorphosis.
